Follow

Truckloads of grain carried off from Ukraine towards Russia.

Just like in the days of Stalin.

This is footage from occupied Melitopol, Ukraine

Once again, Russia plans to use hunger as a weapon.

“

“Hi Marijn. I have connections with a logistical company that distributes food at a global scale. I do not think we should be worried about food sparsity!”

“When you say ‘we should not be worried’, who is ‘we’ exactly?”

Ukraine and many developing nations should definitely be worried.

[Marijn Markus](#) ‘We’ being people driven by negative energy, which will only embark on more distant conflict. There are likely further policies & collaboration in place to offset these extractions; and could perhaps create growth in the long run.

{<https://www.theguardian.com/us-news/2022/apr/28/joe-biden-ukraine-military-aid-us-congress>}. \$33b can go a long way, especially when applying AI optimization techniques. thoughts?

-<https://sustainability.mit.edu/tab/food-systems>

-I know for a fact that MIT has found a way to manufacture food at economies of scale in their labs that can feed the world. I heard that they collabed with a few different programs to get these results. Delicious and nutritious!

-They just need partners to help with distribution and production scalability.

-  Eating The World's UNHEALTHIEST Bowl Of Cereal! Cerealiously, who thought this was a good idea?

For real:

- These new options are even cheaper than junk food, and can be applied to fast food restaurants to add nutrition to their existing foods.
 - World nutritionists should apply region preferences and health standards to the engineering, as well.
 - Still free to choose.
-

Who to distribute:

- I chatted with a few foundations and learned that they have platforms to distribute this nutrition across the globe.
 - There are a couple of supply chain companies that also have a multiple vehicles to help with distribution.
-

What to do with junk food:

- MIT also has this cool device that can convert old junk food into energy.
