

Big Picture:

-<https://news.mit.edu/2022/portable-desalination-drinking-water-0428>

Questions/Modifications:

-Is it possible to apply this to target/engineer certain particles in the air?

-For example, separating CO₂ into C,O,O?

-Also, is it possible to apply this to particles to generate energy? Such as if transported to the moon, could it power homes at night when the sun isn't shining? As well as could it level smart homes energy consumption in peak demands?
