

Big Picture:

- Fully EV by 2023 in America (jack up the price of gas).
 - Incorporate ridesharing ( \$2593 ridesharing in a Tesla rental)
 - but fully automatic
 - The government will get profits (great economic potential in the long run).
 - Reallocate EVs, government issue stimulus for old ones.
 - Old vehicles can be handed over for EVs (if individuals opt in).
 - Old vehicles recycled for parts and then transitioned into energy
-

Then:

- Old vehicle scraps for flying vehicles.
 - apply cleaning things up globally
-

Focus points:

- **insert something later about the mix of geochemistry, ml, astronomy, economics, and renewable energy to globalization**
 - Do this in order to reduce pressure we are putting on economically disadvantaged individuals.
