

Big picture:

- Community College fuels Fortune 500 companies
 - Job growth through the roof
 - Omnipotent. Workers from all over
-

How:

- Fairlawn Real Estate connects community colleges with two year well rounded coursera/brilliant hybrid programs that has an “X” percentage of job placement pending earning of degree.
-

Which companies:

- Any fortune 500 company can customize their own plans and send it to the community college. The community college will then guide the student through the online platform. Representatives and workers at the various companies can even be professors through the community colleges. Or perhaps retired workers.
 - Individuals looking for more skills can keep going through schools.
 - These education systems should be funded by the companies.
-

Outcome:

- Boom. Free tuition for those that want it.
 - Companies get skilled workers with exactly the skills that they want, quickly!
 - Fairlawn gets their apartments filled, and it is their responsibility to make “x” percent of tenants get job placements
 - Brilliant and Coursera get tons of Fortune 500 companies plans.
 - Fueled though.... Renewable energy!
-

When to start:

- Actually, many universities already have this in place, other universities just need to catch up.
-

How to grow connections to manufacturers?:

- Coursera/EdX/Brilliant will reach out to companies and help them codify their openings into plans. Then, students can just complete these plans with an interview at the end for job placement.
-

Areas to grow:

Perhaps companies such as Binance, can start to create crypto education platforms to grow globally - which can plug into universities and highschools through Coursera/EdX/Brilliant.

Other companies will follow suit, which is fine – then people pivot their earnings and iterate.

If governments are hesitant, that is fine too. They will probably just be left behind.
