Big Picture:

-https://twitter.com/BarackObama/status/1517222378748612608
-Quantum Kernels (where the kernel is a given social media platform), and new information is the posts coming in (refer to quantum computer architecture).

SUPPLY

Solution:

-Algorithms can easily filter and assign probabilistic weight to posts, based on core values established within a posted and shareable algorithm.
-Clarify and publish their standard and core values.
 -Can allow public insight and overview.
 -Should platforms have a higher standard of care?

How:
-Install and apply new content design that can easy filter and apply new algorithms that can suck up toxic content.
-Apply section 2/30 (and reform section 2/30).
-Regulation and Innovation do not have to be mutually exclusive, but can rather raise the bar.
 -Will integrate higher levels of trust.
 -Will also promote friendly competition.

New Needs:
- Higher level of collaboration and integration of multi-cultures.
- Regulation has to be part of the solution.
- Needs to be more transparency, which will in theory lead to less toxicity.
- Accurately and simplify the implications of algorithms.
    - Understand algorithms at a deeper level before implementing them.

At minimum:
- Must share what is going on behind the scenes (follow objective *perhaps new* safety standards).
- Affirm the work of democratic institutions, to strengthen the sparseness of a matrix, and reinforce democracy.
- Promote young leaders that stand behind democracy

Punishments:

-Misinformation posters are held accountable for the actions of their posts (with respect to damaging public safety).
-Call out those publicly those that have not been accountable for past mistakes.
 -Omit those that still stand behind those toxic values.

DEMAND

What to do:

-Broaden perspective.
-Consume different types of information, not polarized.

How to broaden:
- Encourage news sources to blend views together, which will in theory encourage diverse thinking by consumers.
- Support programs that offer viewpoints from both sides.
- Will "encourage the worse or better angels of our nature", it is up to us to encourage the better angels of our nature.
    - It is up to us to be critical thinkers, and train our youth.
- Support programs that encourage diverse groups of thinking.
- Reinforce these values on an international scale.
