Big picture:
- ▶ Building a better customer service platform with Thrio and Google Cloud
- ▶ Quantum Calculus.
-Quantum Derivation could open up many doors with respect to our feelings, and having a deep level of sympathy for individuals, despite their conditions.

When to use quantum derivations:

…Always?

Applications:

-Re-evaluate how we judge individuals, and think about our own energy levels.
-Google cloud allows artists (don't have to be great programmers), to create their own coding art. They have tons of dedicated developers that optimize the vision of cloud holders throughout the world, that support their vision.
        - This google cloud has tons of applications that supports the vision from multiple angles, their developers are altruistic warriors.

Potential sample code idea:

```
import physics nerds
from physics nerds import quantumvision
import TheLaw
from TheLaw import fluidity
import energyflow
from energyflow import quantumderivation

# please refer to the calculus video to understand the code block below.
import shapes from video

# This is at the individual level
if point == corner # this means that the point is one of the four corners on the square
        then print('Please derive local source to discover where energy came from.')
if point == core and point == positive energy
        then print('How can we extrapolate this energy?')
if point == core and point == negative energy
        then print('How can we destroy this energy?') # or perhaps, PUSH it far far away.

# this is at TheLaw level

if person # insert name == negative energy within core
```

```
        then print('Sympathize with the individual, and help them alleviate. The last thing you
should do is rebuke.')
```

Extrapolate this to a larger scale, and clean up code. Thank you

---

Questions/Research/Thoughts:

-Google Cloud would probably be the cleanest organization to keep track of this energy. The cloud has a positive energy level emitting from the cloud, with respect to multiple types of energy.
-To any given reader: I am asking you to re-evaluate how you judge and perceive individuals. Thank you for reading and being a consumer of my content.
-As always, feel free to email me Ethan Norton if there are any questions regarding the validity or genuineness of my work.
