I think a good way of performing deductions is by reading body language.

For example, one can look at promiment leaders body languages, and recursively analyze the interconnectedness between these individuals, and perhaps apply different data structures.

I think this is a very efficient way to quickly analyze an individual. However, there are outliers, and this should serve as a very base interpretation in my opinion, and then one can dive deeper.

I did not create this image.. Source = https://dev.to/mosbat/is-recursion-worth-it-3ee6

However, I am skeptical of the base case. I am going to throw in the idea from 'The Black Swan'. by *Nassim Nicholas Taleb* into this discussion. I also mentioned this in my linear algebra course in relation to significant digits and computer vision.
